

New Institutional Membership Benefits Structure

The Society for Pediatric Sedation announces an updated Institutional Member (IM) dues and benefit structure, acknowledging the challenges posed by virtual learning. The basic pillars of our institutional offerings - opportunities to improve sedation education, quality and research at your facility – have not changed. We are offering our unique educational products for virtual learning in flexible ways to meet the needs of remote learning.

We are excited to feature the only pediatric sedation virtual learning package available and now at NEW pricing! The online modules feature case-based scenarios providing a comprehensive review of pre-sedation assessment, sedative pharmacology, sedation-related adverse events, monitoring and management of adverse events, as well as patient recovery and discharge process. Module pricing for members is \$149 per key for up to 49 practitioners within your institution. For 50 or more, the cost is \$99 per key.

Explanation of Benefits

Platinum level membership offers the most comprehensive benefits and greatest value with access to the new SPS Sedation Provider Course® Online Learning and Simulation Packages and the updated Pediatric Sedation Research Consortium Database with opportunities for research collaboration.

Gold level membership offers institutions a choice: Gold Data: a focus on data/research with access to the updated PSRC database and research collaboration Gold Education: a focus on education with access to the new SPS Sedation Provider Course® Online Learning and Simulation Packages.

Pediatric Sedation Research Consortium (PSRC)

PSRC is the research group of the Society for Pediatric Sedation (SPS) and has recently updated the sedation database. Platinum institutions can enter data from all sedation/anesthesia encounters at their institution and benchmark their outcomes with contributing sedation/anesthesia programs nationally. Members will have access to detailed and customized quality assurance reports, which can be used for institutional QA and PI projects, and to satisfy regulatory requirements.

SPS Research Collaboration

The Society's Research Committee evaluates institutional proposals regarding collaborative research projects. This may involve using the PSRC database as well as developing prospective trials. These collaborations have resulted in the publication of scientific [manuscripts](#).

Online Learning Module Package

Institutions, depending on their membership tier, receive access to the learning modules through bonus keys and may purchase additional keys at discount pricing. For detailed information on what is included in the package, go to <https://www.pedsedation.org/offerings/sedation-provider-course/>. These case-based online modules are the only pediatric-focused sedation training virtual product available, and offers CME/CE credit.

Simulation-Based Training Course Programs and Materials

Institutions are provided access to all simulation sedation programs, which are compatible with Laerdal, Gaumard and Muse high-fidelity manikin platforms. Instructional materials for the airway management workshop and the tailoring sedation problem-based cases are also included in the membership package. These compliment the online learning package and can be used in training and credentialing pathways for sedation providers

SPS Sedation Provider Course®

The SPS Sedation Provider Course® is intended to provide sedation practitioners with the basic knowledge and core competencies that promote safe and effective procedural sedation in children. Developed by national sedation experts, the course focuses on patient selection and risk assessment (safety), general approach to procedural sedation, sedation monitoring, sedative drug pharmacology and the recognition and management of the more common sedation-related adverse events. The blended learning system is comprised of an online learning package, plus simulation-based training scenarios, and interactive problem-based cases which together form the live hands-on full day SPS Sedation Provider Course®.

The course experience is ideal for team members who provide pediatric procedural sedation such as physicians, dentists, advanced practice professionals, nurses (including recovery nurses and perioperative personnel), and child life specialists. The SPS Sedation Provider Course® can meet training requirements for annual institutional competencies, provide CME credit and nursing contact hours as well as function in credentialing pathways for those involved in sedation outside the operating room.

The SPS Center of Excellence (CoE)

All institutions are encouraged to apply for the SPS CoE award; however, fees may vary per membership level. The application process for this designation is quite rigorous, for the purpose of recognizing institutions that provide state-of-the-art care with superior patient outcomes and customer satisfaction. Sedation services receiving the designation as a Center of Excellence in Pediatric Sedation are recognized on the SPS website as well as acknowledged during the SPS Annual Conference.

Ancillary Membership

Depending on membership tier, institutions will receive membership opportunities for nursing and ancillary staff, providing these individuals with unlimited access to individual member benefits. These include access to free sedation-specific CEUs through the education section of our website, registration for our annual conference at the member rate, and informative member publications such as the weekly Sedation Communications and quarterly *SPS News*.

Consultation Services

Institutional members may seek consultative services from SPS sedation experts on topics such as optimizing workflow, improving patient billing strategies and meeting current regulatory requirements.

Website Recognition

Institutional members are recognized on the SPS website with a link to your hospital website.

Job Advertisements

Institutions may post available employment opportunities on the SPS site at no charge.
